## Education

**Wuhan University, Hongyi Honor College**  
*B.Eng. in Microelectronics Science and Technology*  
 ○ GPA: 3.86/4.0; Ranking 2/25

**Wuhan, China**  
*Sept 2021 – Jun 2025*

**University of California, Berkeley**  
*Visiting Undergraduate Student*

**Berkeley, CA**  
*Jan 2024 – May 2024*

- Coursework: Intro to Digital Design and Integrated Circuits(EECS151), Linear Integrated Circuits(EE140), Electronic Materials Characterization(Graduate level)

## Research Experiences

**Embedded & Cyber-Physical Systems Lab** [🔗](#), UC Irvine  
*Advisor: Prof. Mohammad Al Faruque*

**Irvine, CA**  
*May 2024 – Present*

### Project: Multimodal Sensor Fusion for Autonomous Driving

- Performed out-of-distribution detection based on multimodal datasets of autonomous driving scenarios to simulate anomaly scenarios.
- Developed an LVLM model for anomaly detection in adverse weather conditions and constructed a framework for autonomous driving scene anomaly detection.
- Proposed a camera-lidar multimodal fusion method, significantly improving stability and accuracy.

**Laser and Ultrafast Imaging Lab** [🔗](#), Wuhan University  
*Advisor: Prof. Cheng Lei*

**Wuhan, China**  
*Sept. 2023 – Jul. 2024*

### Project: Medical Ultrasound Image Segmentation [🔗](#)

- Collaborated with radiologists to construct a new ultrasound image segmentation dataset.
- Leveraged SAM's fine-grained segmentation capabilities to enhance feature extraction, effectively overcoming challenges posed by insufficient medical imaging data.
- Designed a Wisefusion module to integrate SAM features into the Transformer architecture, achieving state-of-the-art results on the BUSI dataset (mIOU >90%), and strong performance on the newly constructed dataset.

### Project: Self-Supervised Depth Estimation in Endoscopy [🔗](#)

- Utilized a knowledge distillation framework, combined DDIM loss from the diffusion model with distillation loss and photometric loss to guide denoising in endoscopic scenes.
- Leveraged discriminative priors from the teacher model to further enhance the denoising process, improving the overall accuracy.

**Yang Research Lab** [🔗](#), UC Davis  
*Advisor: Prof. Weijian Yang*

**Davis, CA**  
*Jul. 2023 – Jul. 2024*

### Project: Monte Carlo-Based SpO2 Measurement Model [🔗](#)

- Constructed a 3D model of blood vessels in MATLAB with layer-specific optical absorption parameters, and performed Monte Carlo simulations to generate time-of-flight (TOF) curves.
- Developed a neural network to map absorption parameters to TOF values, allowing vessel characteristics prediction, and computed SpO2 using the Modified Beer-Lambert Law (MBLL).
- Devised an adaptive algorithm to separate mixed signals from mother and baby for SpO2 calculation, and deployed the system on portable detection devices for real-time monitoring with a model error under 5%.

**Riscv Lab, Wuhan University**  
*Advisor: Prof. Wei Liu*

**Wuhan, China**  
*Oct. 2022 – Jul. 2023*

### Project: Electrocardiogram (ECG) Image Classification [🔗](#)

- Collected dual-lead ECG signals from the MIT-BIH database, enhanced data using GANs, and developed a lightweight model for real-time ECG-based preliminary diagnosis, deployed on embedded devices.
- Built an XGBoost-based diagnostic model after comparing AdaBoost, CatBoost, and random forests, and designed a voting system with four XGBoost models, achieving 97.4% accuracy with limited resources.

## Selected Independent Projects

### Efficient OCR Optimization with LoRA

Feb. 2024 – May 2024

- Fine-tuned the pre-trained TrOCR model on a custom dataset of handwritten, printed, and complex scene texts.
- Optimized the image encoder and text decoder with DoRA and LoRA methods, reducing trainable parameters using Parameter-Efficient Fine-Tuning (PEFT).
- Achieved 84.63% accuracy on complex scene datasets, validating the state-of-the-art performance of DLoRA-TrOCR.

### RISC-V Based 3-Stage CPU Processor Design

Mar. 2024 – May 2024

- Designed a 3-stage RISC-V CPU pipeline in Verilog, and developed a testbench to verify ALU functionality.
- Integrated a direct-mapped cache using SRAM to support RISC-V instructions, CSRs, and basic functionality. Synthesized and optimized the Verilog design using VLSI tools.

### Two-Stage Amplifier Design for LCD Driver

Mar. 2024 – May 2024

- Calculated required gain and slew rate for a two-stage amplifier based on specifications.
- Selected and optimized circuit components (PMOS/NMOS) using MATLAB scripts.
- Tuned parameters in Cadence, ensuring compliance with design rules and optimal performance.

## Patents

- [P.1] Y. Li. Energy-saving calculation method, energy-saving controller, terminal and medium for split air conditioner. China Invention Patent, CN202310099177.0, filed Jan 30, 2023, issued February 23, 2024.

## Honors & Scholarships

- **Innova International Exchange Scholarship**, 6 recipients university-wide 2024
- **Innova Excellence Scholarship**, Top 3%, twice 2023, 2024
- **First-Class Scholarship**, Top 5%, 3 times 2022, 2023, 2024
- **Academic Excellence Scholarship**, Top 5%, 3 times 2022, 2023, 2024

## Skills

- **Languages:** English (TOEFL 110), Chinese (Native), Japanese (Basic)
- **Programming:** Python, C/C++, Matlab, Verilog
- **Tools & Platforms:** Ubuntu, FPGA, Docker, Git, Cadence, Vivado
- **Libraries:** Pytorch, Tensorflow, OpenCV, Scikit-learn
